## **BAM Nuttall and Morgan Sindall secure £136 million M62 contract**

Joint venture bmJV, consisting of BAM Nuttall and UK construction and infrastructure company Morgan Sindall, has been awarded a £136 million construction contract to upgrade the M62 to alleviate traffic congestion.

The project is part of the Highways Agency's four-year, up to £2 billion National Major Projects Framework to deliver managed motorways across England. The framework will deliver schemes to make better use of the existing network and improve journey times and reliability for road traffic.

The M62 works will take place between junctions 25 and 30. It will include utilising sections of the hard shoulder, with resurfacing and drainage improvements, for use as either permanent or peak period additional running lanes.

The project will also involve the construction of new overhead sign gantries, emergency refuge areas and the installation of AMI signs, signalling, speed monitoring and a CCTV system.

Jag Paddam, Morgan Sindall's managing director of infrastructure and bmJV Board member, says: "We are delighted to have secured this important and prestigious project to improve this section of the M62. We have a proven heritage of delivering similar projects and look forward to working with the Highways Agency again to help improve the travelling public's journey times and safety."

Stephen Fox, BAM Nuttall's CEO comments: "We are pleased to receive this significant contract award through the managed motorways framework programme. This strategic approach by the Highways Agency to improve and upgrade its existing assets will help to relieve congestion and will provide a better travelling experience for the general public."

The £136 million contract to construct the scheme is from within the project's estimated budget of £150 million. Work is due to start between October and December 2011 and be completed in 2013-14.
